

I too have a comment and I apologize in advance, it's a little bit lengthy, but I think it's an important thing to say.

So tonight I want to circle back about process as it relates to the municipal expansion project. My comments relate to my decision making specifically. I note that the influencing factors that I lay out have all been available to the public.

For the past 18 months or so, Kennett Township staff, consultants, subject matter experts, and residents have offered much valuable input to the Board of Supervisors regarding the municipal expansion project. Input has come in the form of:

- Needs assessment studies by Kennett Township police and Kennett Township staff, including growth projections and current facility constraints.
- The results of non-building options exploration, such as merging with neighboring police departments and utilizing existing structures, have been explored.
- Public tours of the existing municipal facility demonstrating need has occurred.
- Input has come from public request for proposal producing multiple bids for the project designs and configurations.
- Input has come from selection of the architectural firm specialists in law enforcement building design.
- Budget projections incorporating multiple estimated scenarios for impact and growth.
- Input has come from multiple public meetings where budget projections were featured and input sought from the public.
- Input has come from multiple design scenarios reflecting different design aesthetics and value engineering, as well as long-term viability of a finished product.
- Input has come from a public design workshop with active public participation.
- Input has come from public input at regular Board of Supervisor meetings.

Now, a word about my process. In my years in banking making commercial loans, it was necessary to get all of the pertinent information before making any kind of decision. No one wanted a bad loan on the books, least of all the recommending lending officer. In my subsequent years in marketing and communications, I learned that before you communicated information about a product, case, or decision, one gathers all of the facts before making a final communication or decision.

In a data-driven process, working and reworking scenarios as new information is gathered reveals clarity and usually improvements to process and outcome. The municipal expansion project is no different. For me, this project is data-driven. That is to say, all aspects of input will be considered by me:

- Need
- Scope
- Options
- Design
- Cost
- Functionality
- Public concerns
- Will the life of the project meet or exceed the life of the financing?
- Financial impact weighed against public need

In order to amass all of the necessary data to make an informed decision, we must allow the time to receive the data, weigh the data, and allow for adjustments to whatever the final presentation of the plan will be. We are still in the data-receiving mode as I speak.

I have heard the concerns and requests of the public. Each comment or request has been reviewed carefully and acted upon when it furthered the goal of designing a building scenario that will provide the best possible outcome to solve the problem. I believe that the outcome that will best serve the residents of Kennett Township is:

1. Solve the dual need for providing a policing facility that will assist our officers in utilizing best practices and enhance the ability of our police officers to professionally serve the residents of Kennett Township.
2. Provide the residents of Kennett Township with a functional municipal building, relieving overcrowding and freeing up needed space.
3. Design a scenario that will meet the public need with the least amount of financial impact to the residents and remain appropriate and relevant for the life of the financing.

A smart decision in furtherance of the public good is my goal. While I cannot speak for the other supervisors, I know them to be data-driven individuals and honorable people who will act in the best interest of the township.

Thank you.

Is there any comments for the public? Are there any comments from the public? No? No one online?

*[Off-screen response: "There is no one online, Madam Chair."]*

Thank you, Cassie. All right, do we have...
